Fitness & Wellness

Actors

Value Proposition

Chosen Sub Sector – Nutrition and Wellness

Jobs to be done by Nutrition and Wellness providers

- 1. Managing Health goals:** Help individuals achieve specific health objectives like weight loss, muscle gain, or improved stamina.
- 2. Provide Expert Guidance:** Offer personalized diet plans or expert recommendations tailored to individual needs
- 3. Track progress:** Facilitate tools or platforms to monitor calorie intake, nutrient levels, and fitness metrics.

Key Players

Major Trends

Wearable technology

Provides real-time data that empower users to make informed decisions about their health

AI- Powered Fitness Platforms

AI technology could be able to create hyper-personalized workout and nutrition plans based on genetic information, lifestyle factors, and real-time health data

Virtual and Augmented Reality

These technologies are creating immersive fitness experiences that are fun and engaging. AI can enhance these experiences by providing real-time feedback and adjustments

Biohacking

Biohacking, which leverages scientific and technological advancements to optimize physical and mental performance, is gaining momentum

Differentiators

Personalized AI Health Trackers

By leveraging AI algorithms for data integration, predictive analytics, real-time monitoring, and image recognition, healthcare providers can make more accurate diagnoses, develop personalized treatment plans.

Personalized Fitness programs

Tailored workout plans according to individuals' needs with the required level of nutrients

Holistic Health Integration

Treats the whole person, rather than just symptoms, and aims to improve overall health and quality of life

Gamification in Healthcare

Game elements in healthcare to encourage positive behavioral change
