Objective

[Market Insights & historical data](#)
[Book tickets](#)

A determined Product Manager at BookMyShow—facing mounting pressure as Zomato District is going to launch. With the company's future hanging in the balance, our hero embarks on a mission to transform the ticket booking experience of users to promise them a fair chance of getting tickets

Actors

Summary

Business Objective: Sustain market share and Profitability (Why ?)

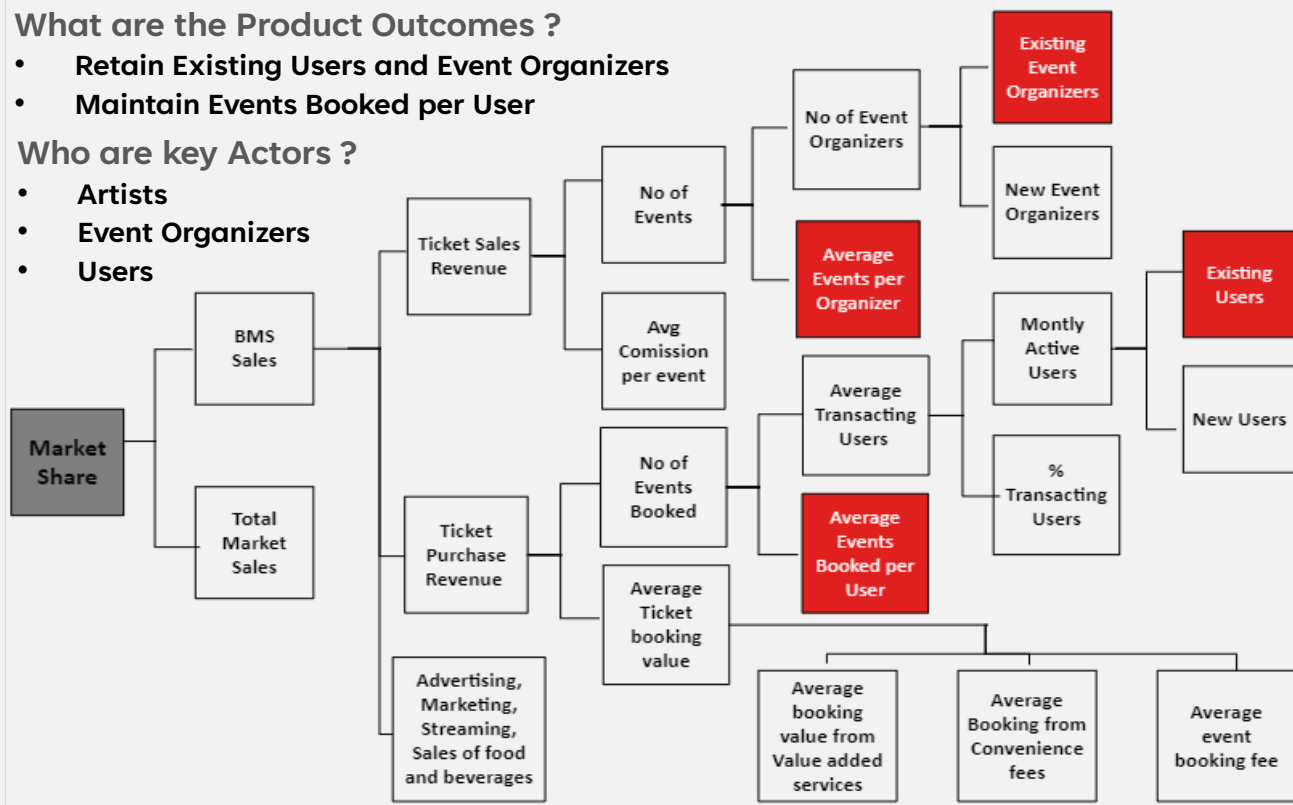

- Market Leader:** BMS is a front-runner in the event and movie ticketing industry.
- BMS Profits:** ₹85 Cr profit in ticketing last year post-COVID
- Historical Crisis :** Thundering herd problem has created trust issues among BMS users
- New Competitor:** Zomato entering the ticketing market.

What are the Product Outcomes ?

- Retain Existing Users and Event Organizers
- Maintain Events Booked per User

Who are key Actors ?

- Artists
- Event Organizers
- Users

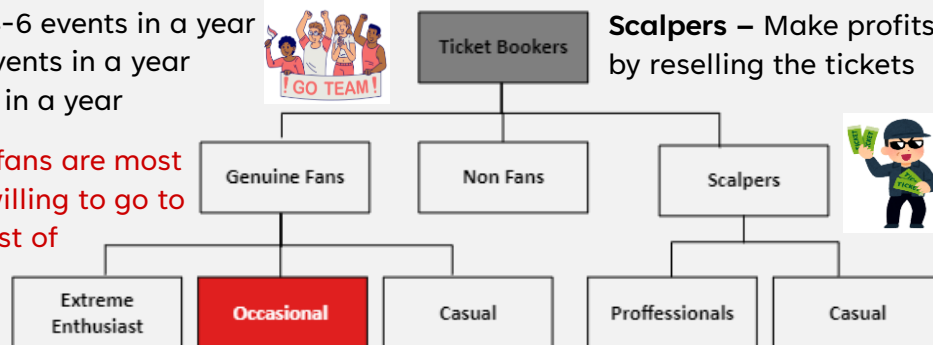

Which segment to choose ? (85 Million Transacting Users per year)

Extreme Enthusiasts – 4-6 events in a year

Occasional Fans– 2-4 events in a year

Casual Fans–1-2 events in a year

Occasional and Casual fans are most important as they are willing to go to events but not at the cost of inconvenience while booking

Non-Fans – Just trying to book tickets on behalf of their Fan Friends, Corporate Events or Offers

Why choose this segment ? Stats - BMS - [13.5 million](#) Event Transacting Users per year guesstimate

User Segment	No. of Users	% User churn	Avg event per year	Average price per event	Total Revenue(cr)	Decreased Revenue	Net decrease
Extreme Enthusiasts(20%)	2 Mn	5%	4	₹ 1,500	118.5	114	4.5 Cr
Occasional Fans (30%)	3Mn	10%	2	₹ 1,200	71.1	64.8	6.3 Cr
Casual Fans (50%)	5 Mn	15%	1	₹ 948	47.4	40.2	7.2 Cr

IMPACT 2% revenue loss
71.1 Cr 64.8 Cr
1.4% market share loss

Opportunities

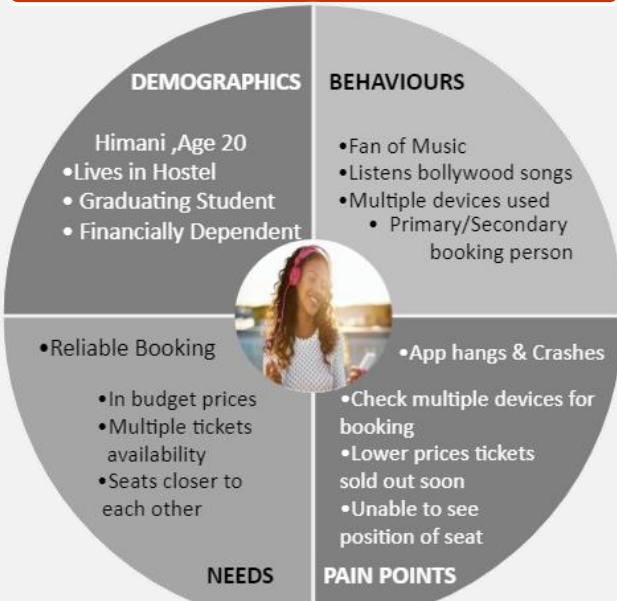

1. Churning occasional fans may result in a 1.4% market share loss.
2. Occasional fans can become dedicated enthusiasts with a quality booking experience.
3. Improving occasional fans experience also benefits casual users
4. Addressing booking challenges enhances user experience and attracts new users.
5. A smoother booking process helps ensure genuine fans attend events, fostering a loyal fan base.

What are their behaviours ?

JTBD – As a fan, I want to watch my favourite artist/sports person/ actor perform when there is an event nearby

User Personas

Linked Pain Points - Event organizer want genuine fans to attend and increase fan base

Competitor Analysis Along the User Journey

Phases

Steps	Goals	Activities	Emotions	Thoughts	Touchpoints
Awareness /Discovery 	Quick Discoverability via the platform he/she follows	Discovers via social media Discusses with friend to go for event Checks the event details		Excited to watch her favourite artist perform Who should I attend with ?	
Consideration/ Decision 	Complete event information Get the Best Seat Possible	Review event details, date, venue and prices Number of tickets required and seating areas		Is the venue nearby? Is the date manageable to attend the event ? Where will I get the best view?	
Booking 	Easy, Fast and Simple booking experience Get the desired tickets	Log in before the time via multiple devices Get in queue if any Make the card details ready Sit with friends and devices to book the tickets		Would I be able to get the tickets ? Can I stay in the queue for long time ? What about refund? If payment gets done and I don't get the ticket ?	
Post-Booking Experience 	Get tickets delivered at home /email Enjoy an immersive event Do not miss imp information	Makes all the planning How to reach ? Stay if needed		What if I do not get the stay options ? Will there be food and necessary amenities ? If not able to book tickets what are the other options ?	
Share 	Share the experience with friends/family	Posts on Social Media		Share negative/Positive experience via social media	

Competition

		What might Zomato district add?
Bigger Media Coverage Announcement Just 2-3 days before the event	Social Media Announcements	Easy reach to Zomato and Blinkit's user base (58 mn)
Complete event details with FAQ's Booking instructions mentioned Interested	Limited event Information FAQ's not covered More offers via paytm	Event categories with food pairing
Advantage Zomato		
Reliability - Average Booking time - Very High Ease of Use - Good Customer Support - Satisfactory	Reliability - Average Booking time - Very High Ease of Use - Better Customer Support - Satisfactory	Experience with 10m+ logged in users Better surge handling, Engaging Interface
Could not stop Black Marketing /Scalping Shares Stays HOTELS NEAR DY PATIL STADIUM	Combat black marketing via Book now, sell anytime!	Faster distribution of tickets via Zomato network
Surveys and feedback 	Highlights 	Post event Screenings

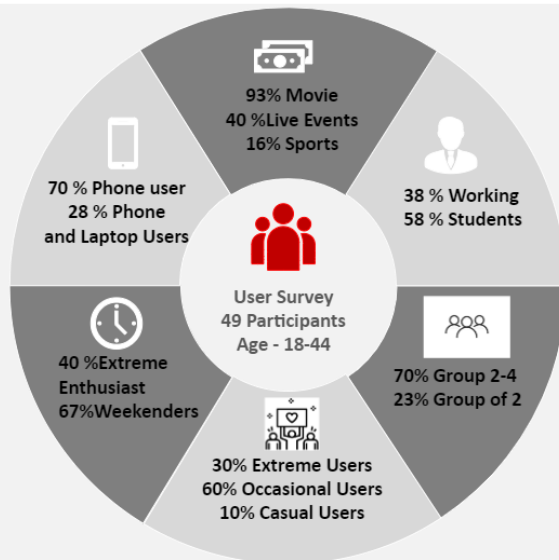

Hypothesis

1. Difficulty securing tickets through legitimate channels.
2. Limited visibility into ticket availability.
3. Lack of fair access to ticket booking opportunities.

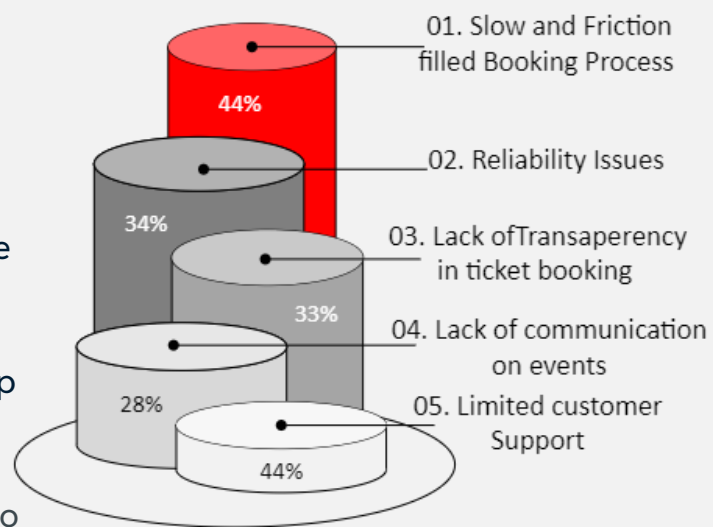

Secondary Research

1. Coldplay, the three shows alone are set to bring in over ₹100 crores in ticket sales
2. 13M login attempts were made on the booking time
3. The booking started late by 20 min due to crashes
4. Users were left hanging in queues with lakhs of queue number
5. All 1.5 lakh tickets for the three shows sold out within 30 minutes
6. Tickets were resold at prices up to 10 times their original price
7. Tickets appeared quickly on reselling platform like Vivagogo

Survey Insights

Pain Points Ranked By the Users

User Interviews (6)

1. Apple users had a higher chance of securing tickets.
2. Users booked in groups of 2-4 with multiple devices.
3. Instructions changed just before login.
4. No notice to exit the queue after sellout.
5. Login took 10-30 minutes.
6. Queue numbers reached lakhs.
7. Queue wait time ranged from 50-90 minutes.

[Survey link](#)

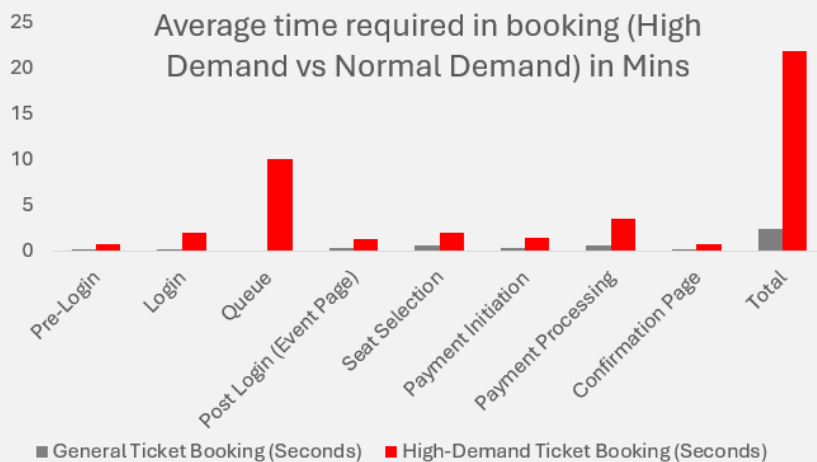

Key take aways

1. Frustrating booking process due to slow responses from BMS.
2. Booking lasted over an hour, despite tickets selling out in 15 minutes.
3. Millions of users overwhelmed the login, causing a thundering herd problem.
4. BMS's technology was unreliable.
5. BMS took minimal steps to curb the sale of black tickets.

Level 1 Issues	Level 2 Issues	% Of users
Speed and Ease of Use	Slow Loading pages	59%
	Login Issues	37%
	Queue Issues	27%
Reliability	App crashes	55%
	Check out issues	12%
	Bots Able to Scalp Tickets	38%
Transparency	Low transparency on seat availability	40%
	Not Enough Steps by BMS to stop reselling of tickets	40%
Communication	Limited information available if something goes wrong	40%
	No notifications on booking turn	27%
Customer Support	No Guidelines for crashes	33%

What is the true problem?

Let's understand the true problem (Graph based on assumptions via survey and secondary research)

Based on all the survey's, secondary research below we have the true problem

The time and efforts required in ticket booking is high

Why- Because of high Queue, Slow login, Page loading and refreshes

Why – Because the system's response time is delayed

Why- Because of large requests sent to the server

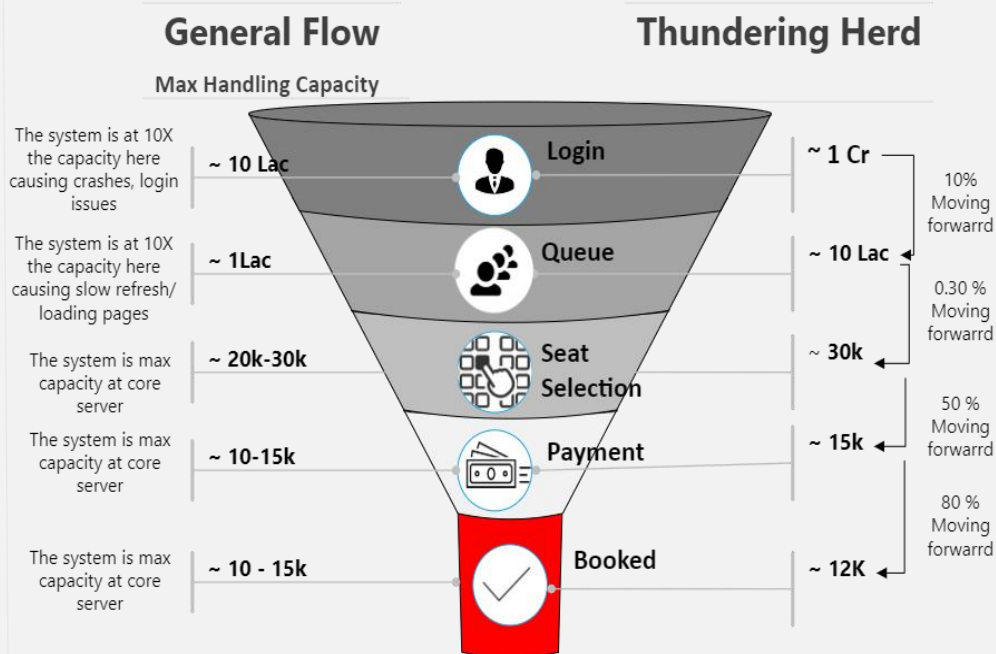

Why- Because of large number of users in the system

Why- The platform lacks proper traffic management of load balancing during peak times mechanisms

Root Cause

Is it a real problem ?

1. Data from the graph clearly displays the time required significantly increases from 2-3 minutes to 35-40 minutes during high demand ticket booking
2. 21 People voted speed and ease of use as the most important problem
3. Interview showed there were 8 accounts logged in for 1 ticket
4. The funnel based on assumptions, survey and secondary research shows surge of users in the system at different steps

Why should we solve it now ?

1. The event ticketing industry had 9.5 X growth from last year
2. 10% drop in occasional fans will cause decline in 1.4% Market share
3. There is direct competitive threat from Zomato District
4. There is indirect threat of trust loss due to resell ticket platforms such as vivago

Who is facing the problem ?

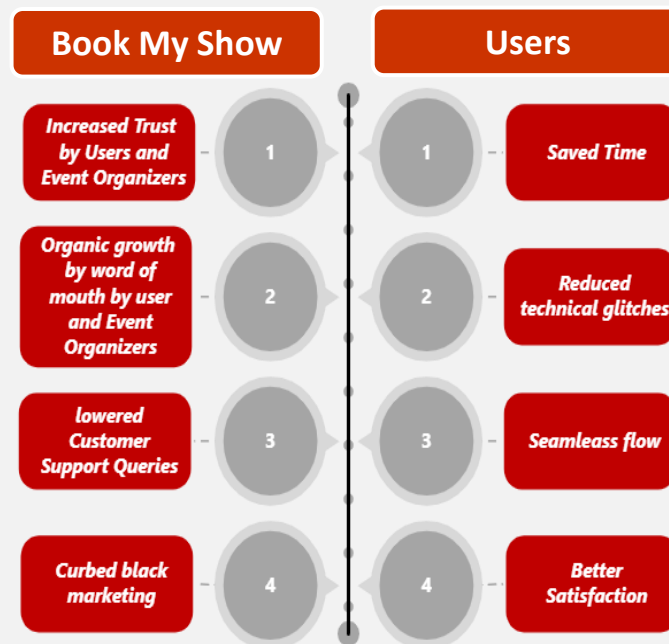

The occasional fans, who are willing to enjoy few events of their favourite artist/event

1. Survey tells there are 44% of occasional users
2. The Extreme enthusiast might turn to black market to get tickets
3. Casual fans would like to attend the event but not necessarily

How does it help

Direct Impact

1. Retained Market Share
2. Fair Ticketing Experience
3. Increased No of events

Improve the traffic by - Reduce the number requests made Or Reduce the number of users logging in Or Reduce the number of users logged in

Event Locker

While in the Queue users are asked to lock the information for event booking

- Email id and Phone No
- Address for delivery
- Payment details
- Ticket Zone & Seats

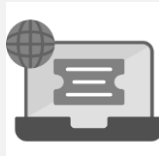

Details removed after the event is booked

Trailblaze

Users will have to pre-register for the event

- Based on the preregistration users are provided with a unique token having specific time slot for ticket booking
- Based on the tickets available and system capacity, number of slots are created (Ex – 10:00- 10:15, 10:15-10:30)

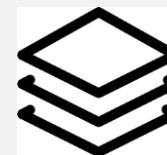

Users are distributed equally across slots and can login in designated slot

Tix Tiers (Multilayered filtering)

A four - layered filtering system to ensure only genuine fans with limited accounts enter the core system by removing them

- Login Based Filtering
 - Bots and Scalpers
 - Multiple or Fake account filtering
- Queue Based Filtering
- Seat Selection filtering
- Address Based filtering

Tier Blazer

Detailed Solution

Pre-Registration of Events ~ 10M

10-15% are scalpers 10% removed ~ 1m

After bot removal ~ 9M

On average each user has 4 accounts (Gmail and Mob no are treated different account on BMS)

Link Gmail and account create unique account decrease device from 4 to 2 Around ~ 30% drop

After Removing Fake/Multiple accounts from devices ~ 6M

6 slots created

System handling capacity at a time ~ 1M

Login ~ 1M

30% drop
Time to login -2 min

30 % are using
Multiple accounts

Queue ~ 7L (1L capacity per min)

10% drop
Time ~ 10min

Why – 10-15% are still
bots

Seat Selection ~ 6L (5K per min)

Time to book -3 min

Available tickets booked 60k

Which Solution to choose ? Why ?

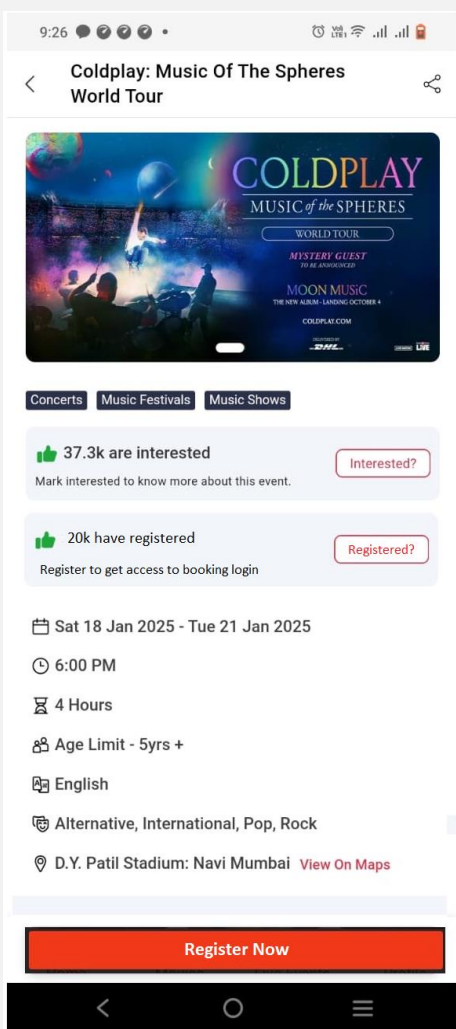

The Tier blazer combination of Trailblaze and Tix Tiers. Combining these optimizes all parameters

How does solution look work ?

- The Tier blazer will first ask for registration where the login-based filtering will change to registration-based filtering tiering users at registration
- Then the rest of the filters do their magic blazing the user experience

Parameter	Event Locker	Trailblaze	Tix Tiers
Value Users~(10Mn)	Reduces the requests by storing information	Reduces the No of users entering at time based on the number of slots	Reduces the users at each step of the funnel (Increased requests due to filters applied)
Impact(100mn (Assuming 10 requests per user)	Assuming 10 request per user reduced to 6 requests Total - 60mn requests	Assuming system capacity of 2.5mn (4 slots) Total - 25mn requests	3 request per step after login and users reduced by 2mn at each step = 8mn*3+6mn*3+4mn*3+2mn*3 Total - 60mn requests
Confidence (Booking time ~ 40min)	Assuming linear reduction in time Reduced by 16 min	Restricted to 15min for each user	Assuming linear reduction in time Reduced by 16 min
Risk	System crash at login	Scalping	System crash at login
Competitor Risk	Easily replicable	Easily Replicable	Unknown to the Competitor

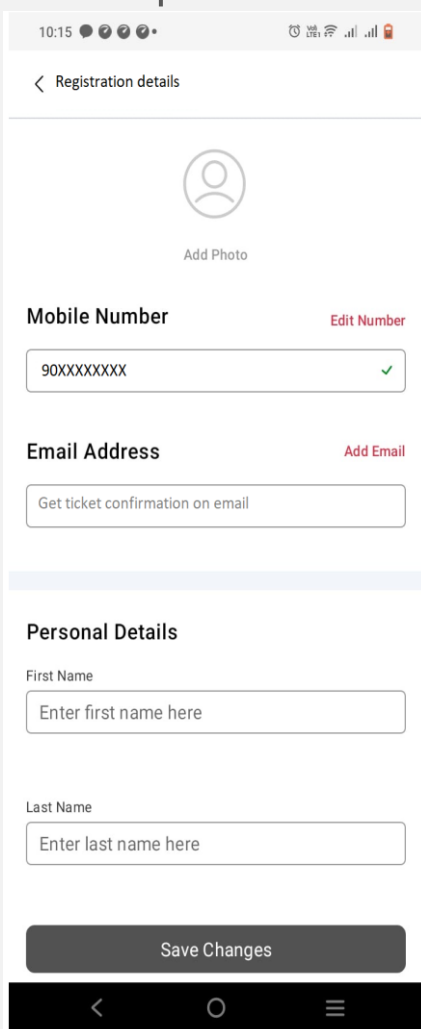

1. Registration Flow

1

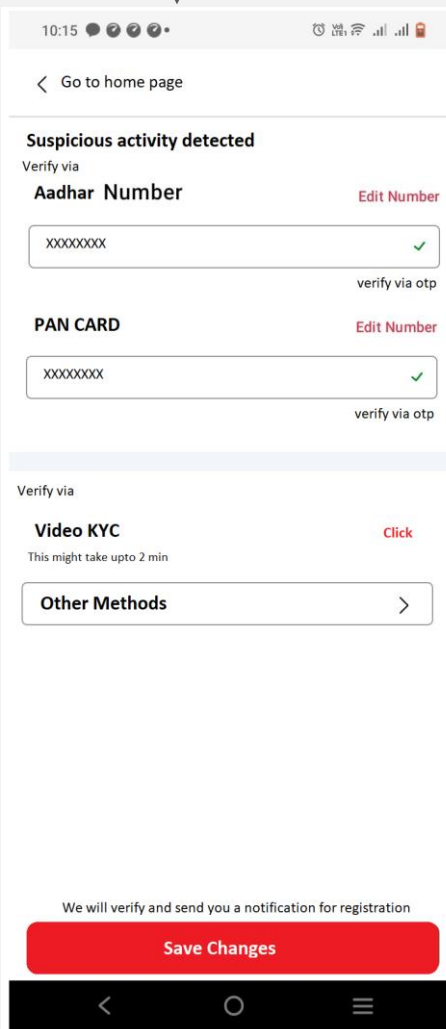

User discovers registration and goes for registration

3 If there is fraud detection extra authentication is asked

2

User fills up the registration page

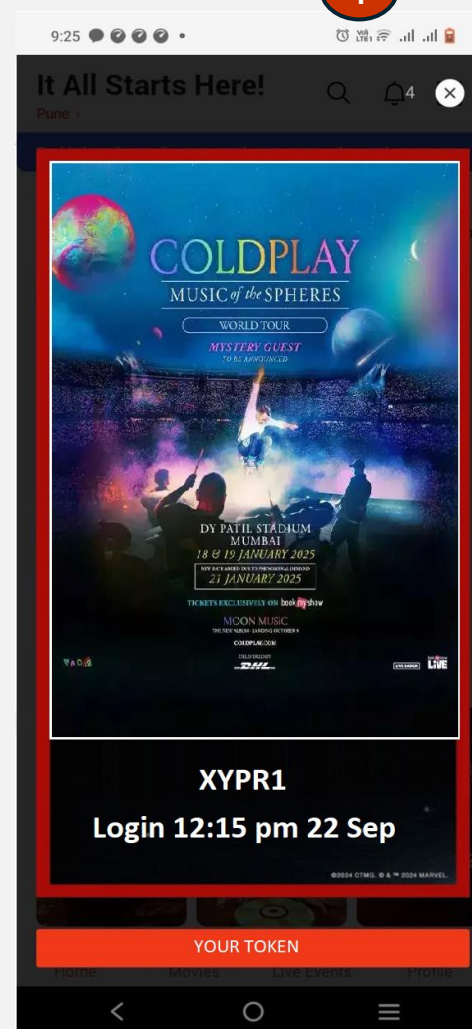

3

User gets unique token after successful registration with details

User logs in at the given time with the token

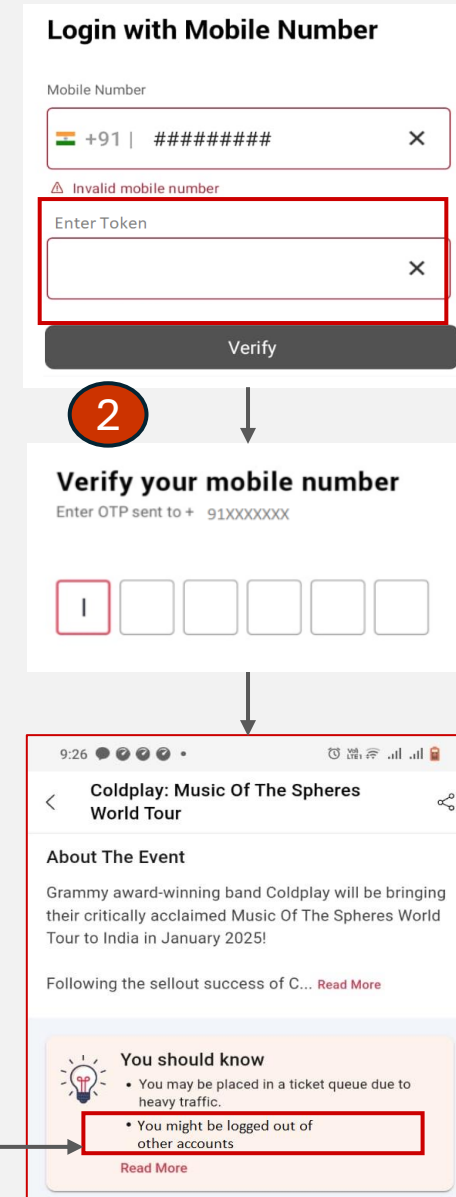

1

3

Updated information is displayed

2. Login Flow

2

1

You should know

- You may be placed in a ticket queue due to heavy traffic.
- You might be logged out of other accounts

System design

System Design

How does the solution provide a unique proposition ? (The filtering formula)

- 1. Address-based filtering:** During pre-registration, users must provide their address. If multiple accounts share the same address, extra authentication will be required
 - 2. Historical User Activity filtering :** Identify users who have successfully obtained tickets for multiple high-demand events, in the recent past
 - 3. In Queue filtering:** Users are identified based on their IP address, geographic data, and device. This helps detect multiple logins to the system for same user

Metric Type	Metric	How is this important ?
North Star Metric	Market Share Events = BMS Revenue /Total Revenue	Measures the impact of the new feature launched directly
Retention	User retention rate - 6 Months retention rate - Event Organizers retention rate 1 year retention rate	To help us identify if the users want to use this new feature or not , Similarly if the Organizers are satisfied with the experience offered to the users
Activation	Token Activation rate = Token used/Token Created	To understand if the users are willing to utilize the tokens for login
Engagement	Queue Adoption rate = No of users in Seat Selection/No of users in Queue	To check if the users are staying in the queue till seat selection
Adoption	Preregistration feature usage rate = No of Pre-registered Accounts /No of Event Visiting Accounts	To understand if the users are willing to use the preregistration feature
Failure	Actual user drop off rate = Actual/Incorrect User drop off/ Total users dropped off from queue	To keep a check if we are not kicking actual/incorrect users out of the system
System	Average ticket booking time • Average Preregistration time • Average Login time • Average time in Queue • Average time for seat selection • Average Payment time - App Crash Rate	To check if the systems are optimizing and delivering with efficiency
Customer Satisfaction	Net Promoter Score Successful ticket Purchase Rate - Total ticket booked without issue/Total tickets booked	To ensure smooth, fair and transparent booking experience

Risks Vs Mitigations

-
- Risk:** User may feel if they pre-registered first then their queue allotment will be earlier than those who registered later
Mitigation: Share clear instructions on event page with details that the first come first in queue is not based on registration time
 - Risk:** Users may not be able to pre-register within designated timeframes
Mitigation: Allow enough time for users to pre-register before the actual login
 - Risk:** Users may feel dissatisfied if they one of the account gets logged out and had chance of booking tickets as well
Mitigation: Explain the users the value generated by removing other accounts thus establishing fair and trust
 - Risk:** Users may feel overwhelmed by multistep authentication
Mitigation: Make sure the multi-step authentication is required for least genuine users
 - Risk:** The tickets remains unsold in one of the designated session's
Mitigation: Overbook the registration slots to account for drop off's or add the remaining tickets to other slots equally

Tier Blazer Effect

Improved speed, reliability and trust

Fair Ticket booking experience

Improved Organizer experience

Reduced black ticket sales

Reduced Customer Support queries

Attracts new users

Extra Advertisers, Promotions

Retained Market Share

With Zomato District on the horizon, our determined Product Manager at BookMyShow rose to the challenge, reshaping the ticketing game and securing the future—victory belongs to those who innovate!"
