

Alpha-Fit

A Tracking App To Achieve Your Fitness Goals

Contributor: Sanketkumar Katore

Status: In Review

Launching on: 1 Jan 2026

Resources: Link to JIRA/Figma/reference PRDs etc

Problem Definition

Fit Page wants to launch a fitness tracking app which collects certain parameters about an individual either via their Mobile phone (google fit/apple health) or via Fitness tracking devices (garmin, iwatch etc.) or via apps like Strava. The suggested name of the App is Alpha - Fit

- The **mission of the company** is to **make the world a healthier and fitter place** and for that reason they want to launch this tracking app to help people track their fitness activities and goals in India and finally across the globe.
- The business goal of the company is to **expand its market share** by **engaging more individuals** and **making them aware** about fitness.
- There are some constraints with respect to the data such as the **personal data compliances** and **permissions to collect data** from other sources.
- **The vision for the launch should be for next two years**

Defining the True Problem

- What is the problem?
The problems that users are facing is
 1. Tracking and Progress Monitoring
 - a. **Difficult to see and track progress** for weight management & muscle gain.
 - b. Lack of **personalized insights** (e.g., whether they are progressing as expected).
 2. Lack of Motivation - Personalized Workout Adaptation
 - a. **Unclear path forward**: How to adjust the **workout/diet based on progress**?
 - b. No guidance on **overcoming issues or performance barriers**.
- Who is facing the problem?
Fitness Geeks & Athletes - Individuals who want to keep a track of their goals, have specific goals achieved within a timeframe and want to gauge how they are doing on a certain frequency.
- What is the business value that will be unlocked by solving the problem?

The projected fitness tracking market in India is **USD 7656 million** with a **CAGR of 19.8%**. Capturing even the 10% of this market will produce us **revenue of 765 mn.**

- How will the target users benefit if the problem is solved?
The target users would benefit in the following way
 1. **Goal Adjustment** - Monitor and adjust their goals on certain frequency
 2. **Informed decision making** - Optimize their performance thus reaching the goals in a better and faster way
- Why is it urgent to solve this problem now?
 1. **Market Value** - There is around 20% of individuals who are fitness geeks and athletes and this will keep growing as people are becoming more fitness enthusiasts. With such a growing market the business opportunity is huge to be addressed.
 2. **Competitor threat** - If we do not solve it now, there are already competitors in the market who are providing partial solutions and would enter this space to expand their businesses soon.

Validation of the problem

Didn't get enough time to do user surveys or interviews, but went through app reviews and social media feedback to validate the pain points. Links to the resources are in the appendix.

Competitive landscape

Current Fitness Tracking App	Features	Weakness
Healthify me	Offers services such as calorie tracking, nutrition advice, fitness coaching, diet tracking and workout plans	Limited only to nutrition tracking and calorie consumption
MY Fitness Pal	• Track food intake, calories and set nutritional goals • Large food database and community support	Limited only to nutrition tracking and calorie consumption
Fittr	• Help users achieve their fitness goals. • Provides detailed progress tracking, including metrics like weight, body fat percentage and workout performance	Cannot edit goals based on change in plans
Nike Training Club	A free fitness app that offers programs organized by workout style,	No progress tracking

	equipment needed, and muscle areas. It also provides nutritional measures	
--	---	--

Understanding the target segments (Tier 1 & 2 Audience)

Let's empathise with the target audience.(Assuming 30% Urban Population of India in Age Segment (15-60). Around 200mn Targetable Market)

These are the segments which are looking for a fitness tracking app.

1. **Chronically ill Individuals(25%)**- These are individuals who have an ailing illness for long term, like hypertension, sugar and breathing problems, heart problems. They want to track the element for knowing the status of their chronic condition.
2. **Fitness Geeks & Athletes (20%)** - Individuals who want to keep a track of their fitness, have specific goals and want to gauge how they are doing to improve.
3. **Elderly preventive users (10%)** - Users who are old and want to see their activity like fall detection and other important problems such as heart rate.
4. **General fit users (45%)** - General users trying to track the activity casually for a small duration or are casually active.

Target Segment

Majorly these three factors determined to choose **Fitness Geeks and Athletes** to solve the problem for

1. **Behaviour** : They share their activity on social media thus encouraging more users to come to the platform.
2. **Frequency of usage**: Very high, thus more activity and engagement
3. **Segment Growth**: Growing segment with willingness to pay for health related technology

The other target segment could be General fitness users but their engagement would be low as they are not much active. Hence it would be difficult to acquire a lot of users.

User Journey

	Awareness Discovery	Interaction	Engagement	Post Activity
--	--------------------------------	--------------------	-------------------	----------------------

Tasks	Determine the Activity to be done Create a schedule or a plan	Wear the device Start the tracking	Begin the Activity Complete the small goal Measure the insights	Complete the larger goal Share on social media Keep a Check on the progress over a week/month
Questions	How to create a specific plan ?	How should I use the device ?	How do I know how I performed ?	Did I complete my goals ? Am I improving ?
Emotions	Confused	Excited	Satisfied/Dissatisfied	Motivated
Touchpoints	Google/ GPT/Fitness Apps	Smart Watches Apps	Activity Tab	Social Media Apps

Pain Points

- Below are the pain points of the user while using a fitness tracking app. The pain points **1 & 5** are most important for engagement and awareness. Awareness in this industry is mostly by word of mouth and social activity sharing. .
 - Tracking & Progress Monitoring**
 - Difficult to see and track progress** for weight management & muscle gain.
 - Lack of **personalized insights** (e.g., whether they are progressing as expected).
 - Workout & Activity Logging**
 - Manually entering workouts is tedious**; difficulty in remembering sets, reps, and progress.
 - No **automatic syncing** with wearables or gym equipment.
 - Scheduling & Accountability**
 - Missed workouts** due to urgent commitments; need a way to **reschedule or adjust** plans dynamically.
 - Difficulty in **tracking rest days and recovery phases**.
 - Content Discovery & Learning**
 - Searching for **verified fitness knowledge** (workout techniques, diet, injury prevention) is **time-consuming**.
 - No easy access to **expert advice without sifting through unreliable sources**.
 - Motivation & Mental Resilience**

- a. **Staying motivated is difficult**, especially when **results are slow**.
- b. No **community or support system** to **share progress, struggles, and motivation**.
- c. **Unclear path forward**: How to adjust the **workout/diet based on progress**?
- d. No guidance on **overcoming plateaus or performance barriers**.

Solutions

Assumptions - The user has already decided the goals and its timelines.

Data Collected

1. **Steps Tracker** - Directly from the integrated steps tracker from the Mobile
2. **Calories Burnt** - Again from the mobile or third party apps
3. **Sleep Tracker** - Mostly from third party apps if allowed
4. **Weight Tracker** - From any app that is present in the app/manual
5. **Heart Rate** - Through Smart watch (if consent is provided)
6. **Nutrition Data** - Through third party apps like healthify me

Performance Gauger and Adapter

- **Goal Tracking & Adaptation** – Tracks user data to check where they stand in their fitness journey (muscle gain, weight loss, strength improvement) and creates a plan to hit their goal.
- **Calorie & Nutrition Planning** – Calculates how many calories to eat or burn daily and keeps adjusting based on activity and progress.
- **Automated Goal Re-evaluation** – If a user misses a workout or takes a break, the system automatically updates the timeline and tweaks the plan to match their new goal.
- **Sleep & Heart Rate-Based Adjustments** – Uses sleep, heart rate, and recovery data to suggest the best workout intensity for the day, ensuring users stay on track.
- **Muscle & Weight Tracking** – Keeps tabs on muscle size and weight every week to track progress and make necessary plan adjustments.
- **Progression Bar & Motivation Boosters** – Shows a progress bar with achieved milestones and upcoming breakthroughs to keep users motivated, along with badges for achievements.

AI-Powered Smart Coach

- **Personalized Based on Behavior** – Tracks past trends and user habits to create a customized fitness plan.
- **Daily Workout & Nutrition Planning** – Creates workout plans and diet recommendations, suggesting exact foods to meet daily calorie goals.

- **Stress & Activity Tracking** – Monitors stress levels based on daily activities and gives stress-relief tips.
- **Overtraining & Undertraining Alerts** – Keeps an eye on heart rate and calorie intake to warn users if they're pushing too hard or not enough.
- **Smart Recovery & Wellness Reminders** – Sends AI-driven reminders for hydration, meal timing, recovery, and stress management.
- **Multiple Paths to Goals** – Suggests different ways to reach a fitness goal so users have flexibility in their approach.
- **Motivation & Social Engagement** – Sends notifications based on achievements, peer progress, and upcoming milestones to keep users motivated.

Highest Priority – Performance Gauger & Adapter

- Best suited for **pain points 1 and 5**, helping users **track progress with real-time performance bars, adjust plans based on fitness metrics, and stay motivated.**

Second Priority – AI-Powered Smart Coach

- Directly addresses **pain points 2, 3, and 4** by **automating workout & nutrition plans, providing smart reminders, and dynamically adapting schedules.**
- Tackles **pain point 5** by providing **verified, AI-driven fitness and nutrition insights**, eliminating the need for web searches.
- Keeps users engaged by addressing **pain point 6** with **motivational nudges and peer-based achievements.**

Goals

Awareness and Engagement are the key product goals that we will target here.

Success Metrics and Key Data Points to Gauge to make sure our goals are met

Metrics	Formula	Definition
Market Share	Revenue of company/Total Revenue Generated in the market	Market Share of the industry. (The business goal is to make india/world a healthier place which can happen from out company by reaching out to more individuals and generating more revenue in this market)
Awareness	No of app searches	How many times has the app been searched on google play or app store ?
	No of times app clicked	How many times people clicked on the

		download button ?
	No of App Installed	Total Apps Installed
Activation	No of User Sign ups	New users who signed up
	L2- % User syncing data	Total Account sync/Total Sign ups
	L2 - % Users creating profile	Total Profile Created/Total Sign ups
Acquisition	% Of users who used the feature for more than a week	No of Users using feature for a week or more/ Total App Users in 3 months
Engagement	Time Spent on the App % Of Users who created a plan	Overall time spent on the app
	L2- % Of users who visited the progress dashboard	No of users who visited the progress dashboard/Total Users
	L2- % Of users who used the muscle and weight tracker	No of users who used muscle and weight tracker/Total Users
	L2- % Of Users who used the adjusted goal option	No of users who used the adjusted goal option /Total Users
	L2 - No of Social Activity Shares No of likes No of Shares No of Comments	No of users who shared their activity
	L2- Avg Workout time	Average time for workout
Referral	No of Referrals sent	No of Referrals sent by the active users
	No of Referrals used for new sign ups	No of referrals used by new users to create account
Retention	DAU/MAU/WAU	Active Users Daily - Everyday activity WAU- At Least one activity in a Week MAU - At Least one activity in a Month
	Churn Rate	% Users who left the platform
	Retention Rate (7,30,90,180,365)	% Of Users who keep coming back in 7 days, 30 days and so on
Failure Metric	Subscription	No of Users who cancelled the

	abandonment rate	Subscription
	Average inactive days	Average number of days without any activity
	L2 - Feature abandonment rate	% of Users who discard usage of any particular feature out of all active users
	L2- % of incomplete workout plans	No of workout incomplete/ Total Workouts created

Non-Goals

Areas that we don't plan to address.

General Activity Tracking - We would not focus on general activity such as Steps tracking as the data for these is already present through integrated apps on mobile phones and smart watches. The app is for fitness geeks so it should go beyond the traditional apps and be more focused on personalized approach.

GTM Strategy

This plan focuses on launching and scaling the Performance Gauger & Adapter by creating awareness, ensuring strong distribution, and driving user engagement.

Awareness Generation (Marketing)

Goal: Make sure fitness enthusiasts know about the product and want to try it.

- Collaborate with fitness influencers on Instagram, TikTok, and YouTube to showcase how AI-based performance tracking works.
- Sponsor marathons and sports events to provide exclusive access to participants and create credibility.
- Put up billboards and outdoor ads near gyms, sports complexes, and running tracks to target fitness-focused users.
- Share blog posts and website content about AI-based fitness tracking to educate potential users.
- Build communities on Quora and Reddit, answer fitness queries, and promote the product naturally.

Distribution Channels

Goal: Make sure users can easily access and use the product.

- Partner with smartwatch and health device companies like Apple Watch, Garmin, Fitbit, Whoop, and Oura to offer free premium subscription trials.

- Collaborate with major gyms and sports clubs to provide exclusive discounts and early access to members.
- List the app on Google Play and the App Store with strong App Store Optimization (ASO) for better visibility and downloads.

Launch Strategy

Goal: Test, create excitement, and get early users.

- Beta test the app with athletes and fitness influencers to fine-tune AI recommendations.
- Gather feedback from early users and make necessary improvements before the full launch.
- Launch the app at major sports events like marathons and triathlons to attract serious fitness enthusiasts.
- Create a waitlist to build exclusivity and hype before launch.
- Introduce a referral program where users can earn free membership days by inviting friends.

Post-Launch Growth & Engagement

Goal: Keep users engaged and encourage long-term usage.

- Add leaderboards and milestone achievements so users can track progress and compete with others.
- Collect user reviews and testimonials, then share them on platforms like YouTube and Instagram Reels.
- Provide data-driven insights and personalized coaching to keep users motivated.
- Monitor user engagement and retention metrics, then make improvements based on what works best.

Risks & Mitigations

Brainstorm things that can go wrong and how you plan to avoid them

Risks	Mitigations
Users can get confused by constantly changing workouts and get frustrated	Make sure the workout revolves around the core activity and only minimal changes are made with the updated schedule of the user
Users may get demotivated if they see they are far behind the peers	Normalize the score based on activity and personal goals than a general leaderboard to account for beginner/intermediate/advanced fitness geeks

User might not be willing to share all the data from multiple apps and may just be happy with the basic details	Clearly call out, the feature can work with limited data and the plan for action will be based on the data the users provide
