

Travel planning assistant on a

Wireframing

Booking.com

Objective :- Create wireframes for a travel planning assistant on Booking.com

The successful booking flow

The user can see the AI assistant on the booking page

A new chat open's on clicking through it

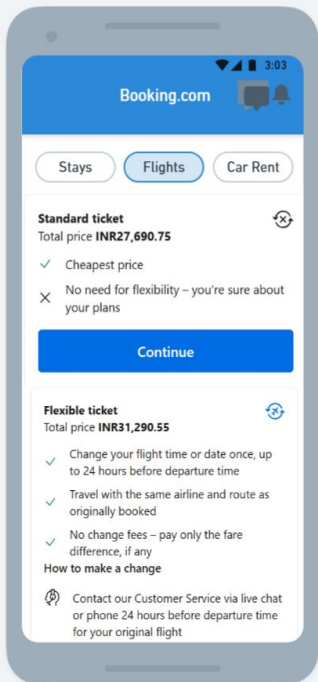

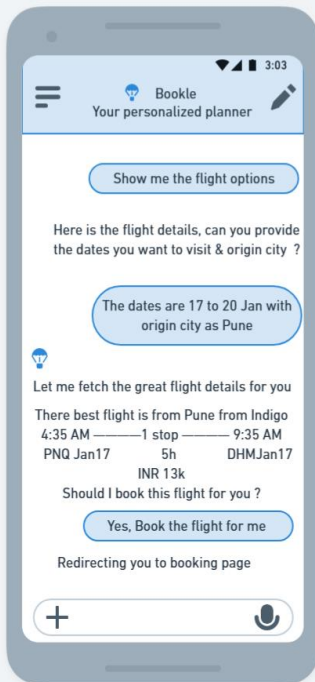

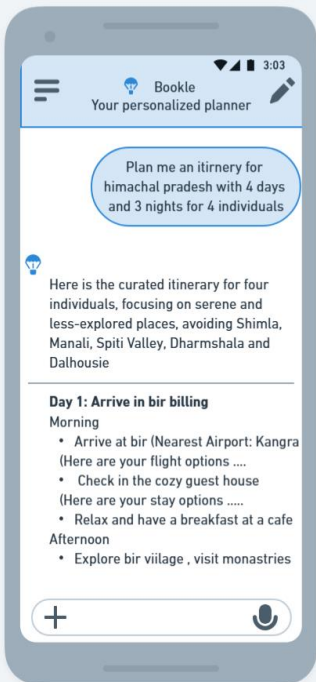

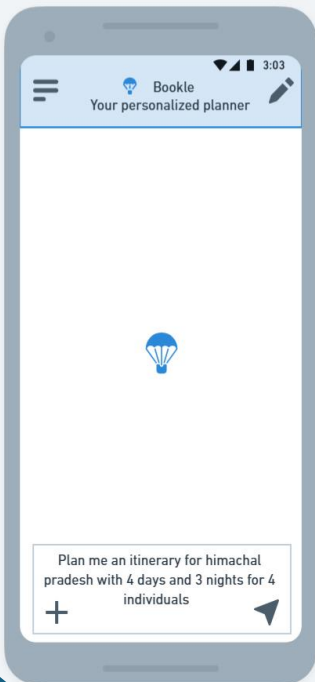

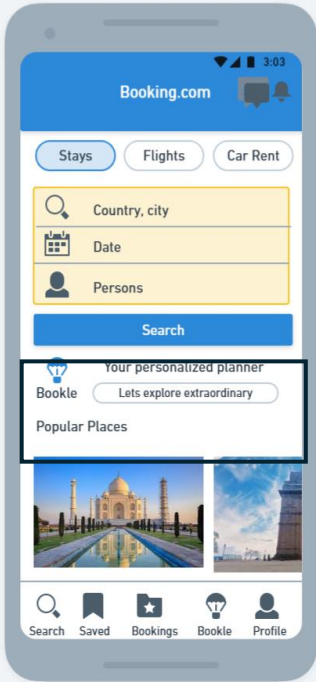

Write whatever prompt you have

The assistant gives you a planned itinerary

The assistant shares complete details of booking

Finally, it redirects you to the payment page

Normal Successfull flow

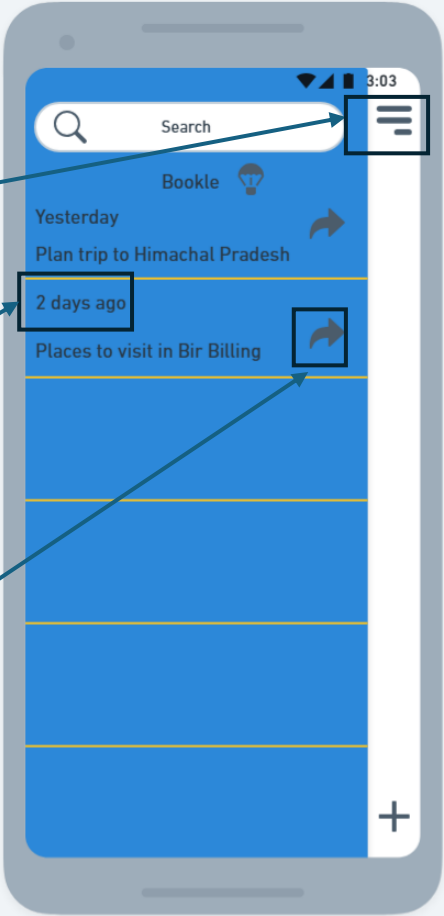

Booking.com

Recommended prompt

The prompt saving workflow

Saved History

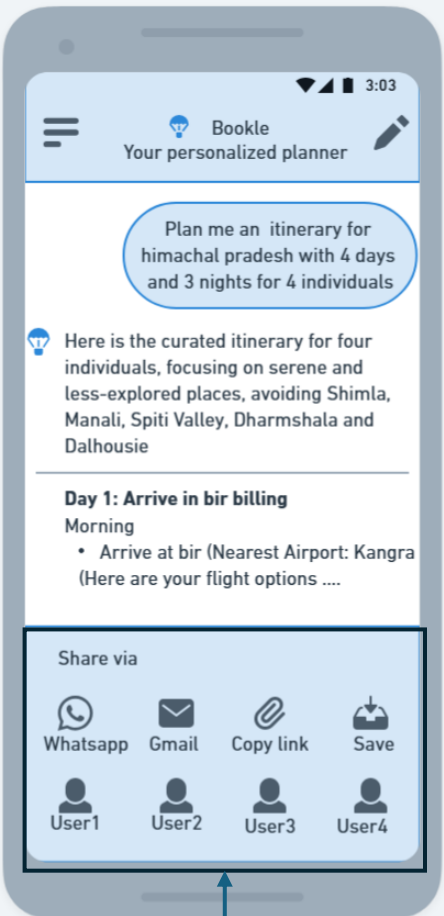

The saved history is shown after expanding the left top settings icon.

The history is shown based on the day

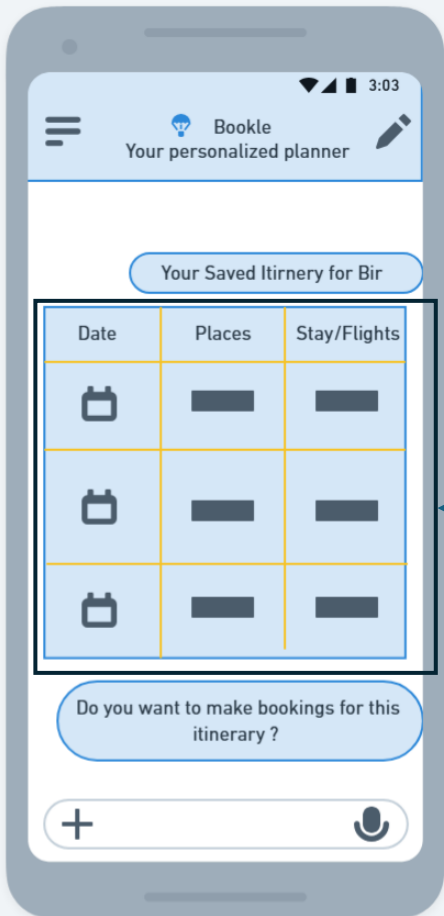

You can share your history chat with others as well

Share History

Multiple sharing options are present along with whatsapp

Personalized Itinerary Saved

The plan is saved in a tabular format for quick reading and understanding

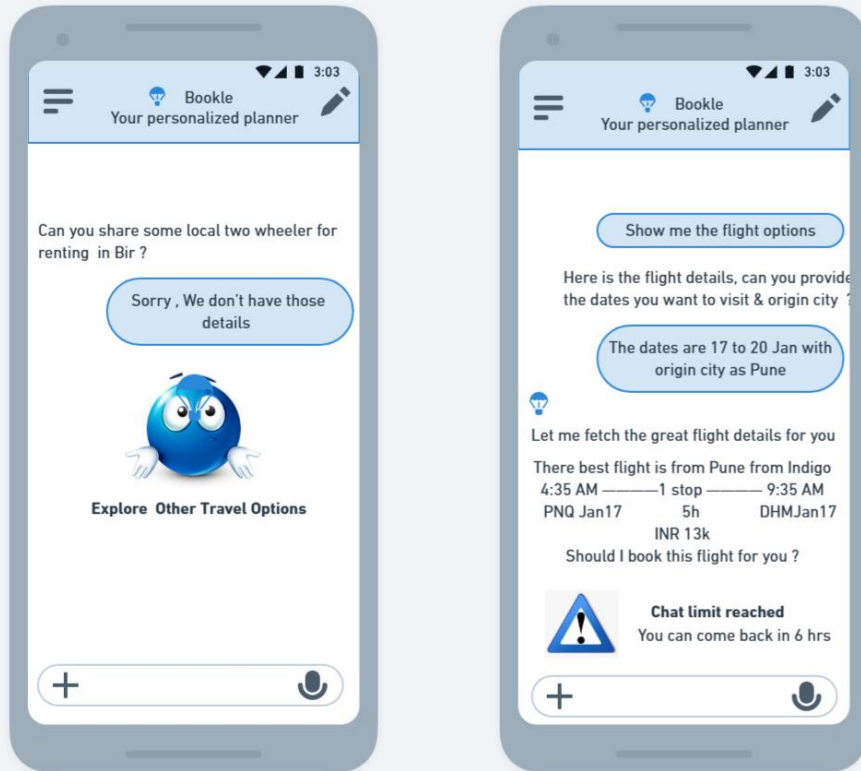

The unsuccessful and comparison workflow

The error workflow covers various cases

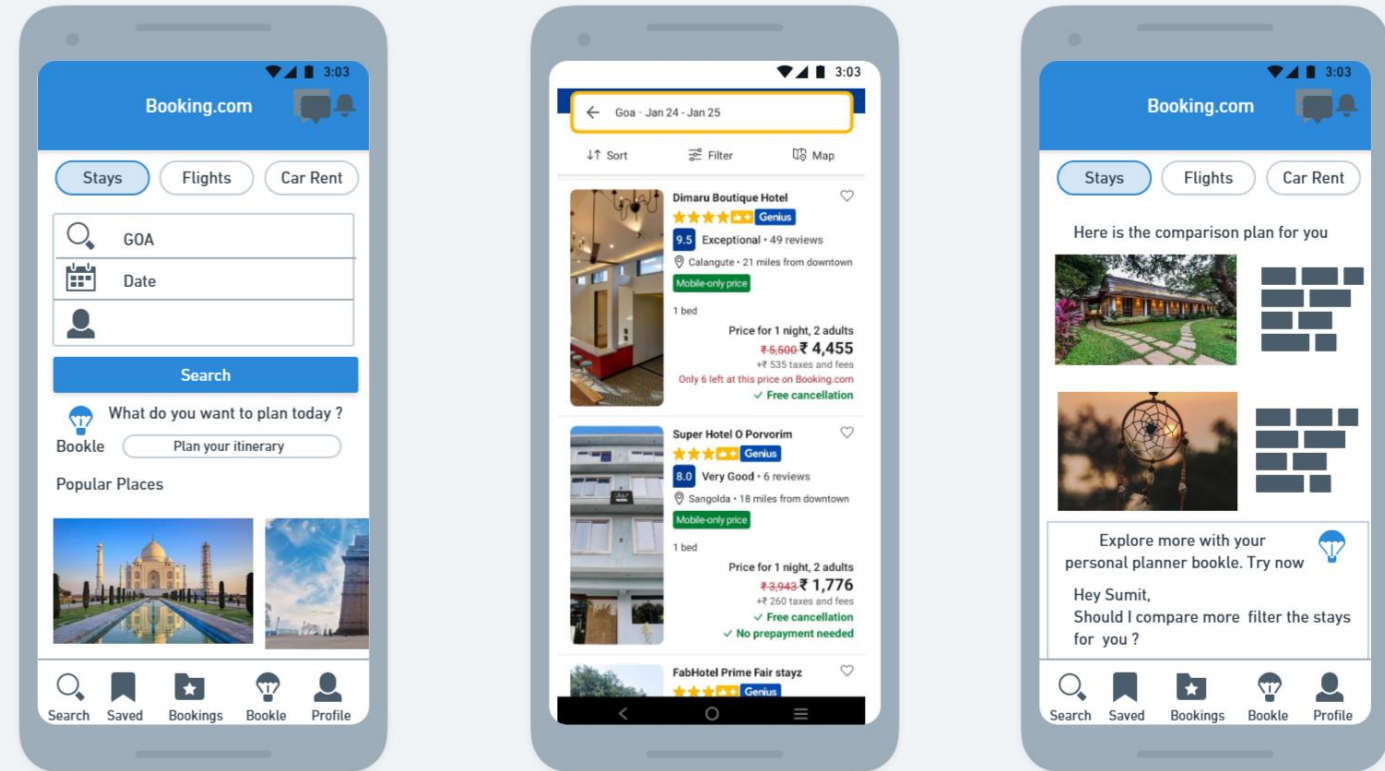

1. When the prompt is not servable by booking.com
2. When the chat limit is reached

In the comparison workflow, the user is trying to assess various alternatives where the bookle, gives complete recommendations based on the factors provided

Error Workflow

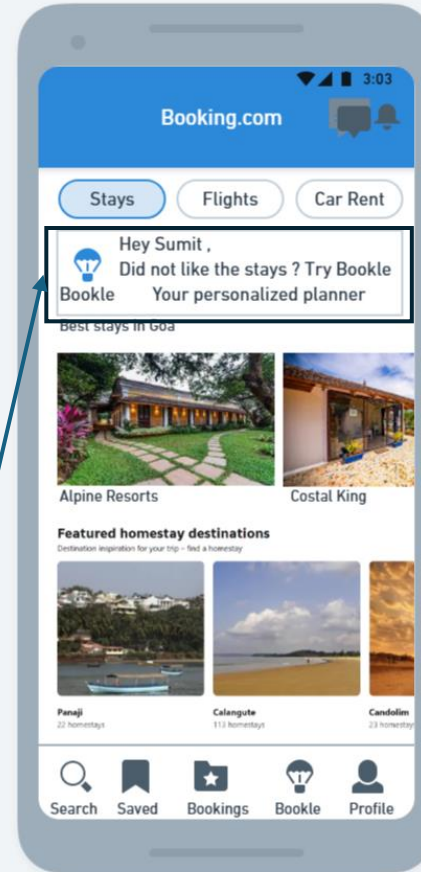

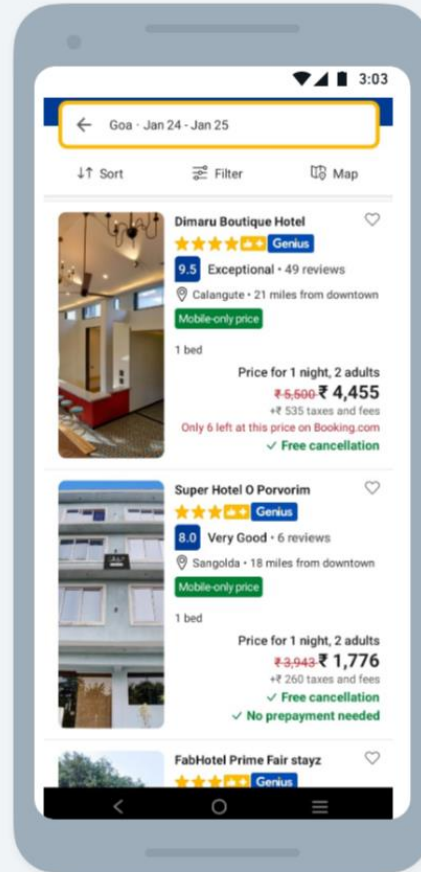

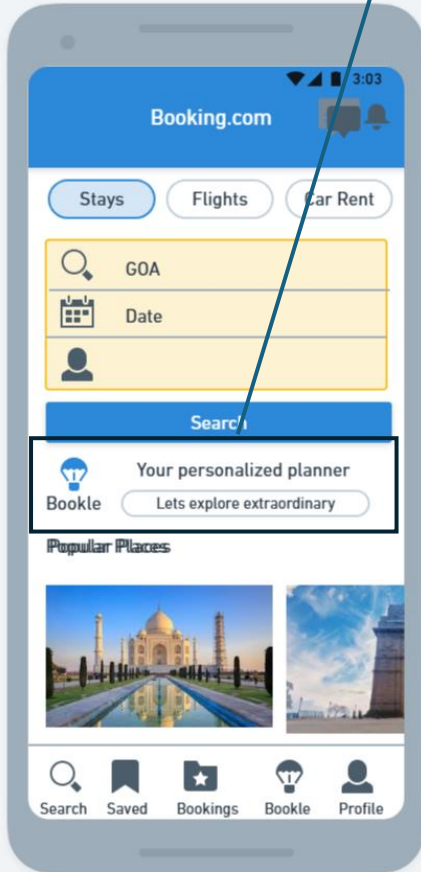

Comparison Workflow

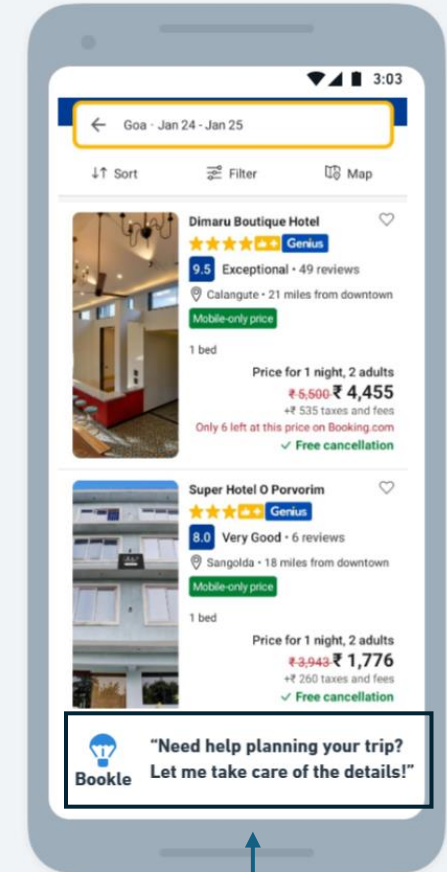

The Discovery Workflow

The users discovers bookle at the front page in the first wireframe

Discovery Workflow

Pop Up Icon

Booking.com

The user spends some time on the app and is unable to find good recommendation , a banner appears

A pop icon appears if users spend a lot of time scrolling
